

Remote Data Entry With Reporting

Remote Data Entry is an Add-on to the PHOENIX® Automation software that allows dealers or customers to maintain their accounts without impeding operations at the central station. Remote Data Entry eliminates redundant data by empowering dealers or customers to:

- Enter new accounts
- Modify and delete accounts
- Put accounts on TEST
- Remove accounts from TEST
- View signal history
- Run reports on own data

Security is an integral part of the Remote Data Entry product. Each dealer or customer has parameters that define the level of access to the Phoenix system. Vital information can easily be protected by limiting access to specific data and functions.

Connecting to the Phoenix system can be accomplished with LAN/WAN/Internet/VPN connections.

Features and Benefits:

- Eliminates redundant data entry by allowing dealers and customers to maintain their own accounts.
- Reduces telephone traffic to the central station from dealers.
- Allows immediate access to account information for dealers or customers.
- Restricts access to specific data and functions by dealer or customer.
- Access provided via network connections.

Add-on

Technical Specifications

These specifications are the minimal requirements for this product.

All hardware components must be listed on the Microsoft Hardware Compatibility List for Windows 2003. Current as of 05/04/11, these specs are subject to change without notice. Call the ABM Technical Support for up-to-the-minute specs.
